Accelerate Identity & Access Management

Kloudynet

Objective

The prime of Accelerate IAM is to act as a catalyst for a New Era Digital Transformation.

Benefits

1 – Fast track deployment of IAM in your organization

2 – Flexible deployment options based on your needs (Cloud Only, Hybrid, On-Premise Only)

3 – Increase employee productivity

4 – Access SaaS and on-premise applications with a single identity

5 - Consolidate, control, and simplify access privileges

6- Optimize Identity and Access Management TCO

Digital Transformation

In the modern IT environment, organizations need to know who is accessing what, when, where, why, and how. That's where a strong Identity and Access Management solution comes into play that every modern company of the 21st century needs.

The offering facilitates both a full-fledged Identity Suite with identity management and governance capabilities, and the Secure Cloud IDaaS solution, which features web SSO and authentication, and provisioning for cloud and on-premise systems.

Key Aspects / Features of AIAM:

1. Fast track assessment by experts to provide our customers with the right IAM strategy
2. Weeks and not months to deploy an End-to-End IAM solution for organizations
3. Deep development experience and expertise to move your .Net, Java, Mobile or any other applications to SSO
4. End-to-end Identity automation be it on the Cloud, Hybrid or only on-premises
5. Deployment of additional features like MFA, Just in time administration, reporting.
6. KloudyNets IPs which can be reused for faster deployments.

Fast track deployment of IAM as per your organizations need

Deployment Scenarios

- Assessment
  - Assessment questionnaire
  - Assessment report

- Cloud Only
  - Deploying Cloud only Identity
    - Azure AD (Basic/Premier P1,P2)
    - Azure AD Domain Services
  - Optional
    - MFA, Information Protection (AIP), Intune, ATA, Cloud App Security
    - AzureAD B2C

- Hybrid
  - Deploying Hybrid Identity
    - Azure AD (Basic/Premier P1,P2)
    - On-premise Active Directory Services sync using AADConnect
  - Optional
    - MFA, Information Protection (AIP), Intune, ATA, Cloud App Security
    - AzureAD B2C
    - Deploying SSO on custom applications (.Net, Java, SPA, Mobile) using ADAL/MSAL
    - Microsoft Identity Manager
    - Hybrid reporting with AzureAD reporting services
    - GraphAPI Integration

- On-Premise
  - Deploying On-premises Identity
    - ADFS 4.0 deployment for Single Sign-On
    - Move applications (.Net, SPA, Mobile) to SSO
  - Optional
    - MFA On-premise server
    - Microsoft Identity Manager

Today's IAM systems should be agile to quickly adapt to the new business initiatives and also deal with the threats that arise. Organizations need to shift from thinking of their IAM systems as a collection of separate use case capabilities to creating an intelligent IAM platform.

KloudyNets Accelerate IAM offering helps organizations deploy and adapt to the new IAM which is more agile for today's businesses, application ecosystems and threats. The offering is a rapid deployment of IAM into your organization with the below key deliverables

Business requirements and assessment: IAM workshop includes discussions with the business stakeholders to understand the organizations requirements and roadmaps. Assessment report will be submitted at the end of the 2 weeks workshop with a detailed IAM strategy.

Scenarios and Demonstrations: Based on customer scenarios, derived from the assessment, demos will be shown by our IAM experts to see it all in action.

Technical Design and Architecture: Based on the customer scenario (Cloud, Hybrid or On-premise) a technical design and architecture will be derived. Detailed design documents with infographics will be a part of the deliverables.

Deployment: Production pilot fast track deployment will be done within the defined timelines for the chosen customer deployment scenario. Optionally an end-to-end deployment will be provided based on requirements.
