MIP AND DLP IMPLEMENTATION FOR A LEADING AIRLINE IN THE PHILIPPINES

A leading airline in the Philippines needed a comprehensive solution to manage and protect sensitive data shared across OneDrive, Teams, SharePoint, and endpoints.

The Challenge

The airline needed to protect sensitive customer and operational data from breaches, meet stringent data privacy regulations, prevent accidental data leaks across multiple platforms, and drive user adoption of new data protection policies.

The Solution

- Implemented Microsoft Information Protection (MIP) to automatically classify and label sensitive data, apply encryption at rest and in transit, and enforce role-based access controls.
- Deployed Data Loss Prevention (DLP) policies across OneDrive, Teams, and SharePoint to prevent data leaks.
- Established real-time monitoring and alerts for potential data breaches and policy violations.
- Conducted comprehensive user training on data protection best practices.

Results

- Achieved a significant reduction in data breaches and leaks.
- Successfully met local and international data protection regulations.
- Streamlined data protection processes, improving overall operational efficiency.
- Increased employee awareness and adherence to security policies.

Conclusion

By implementing an integrated MIP and DLP solution, Kloudynet enabled the airline to significantly reduce data breaches, achieve regulatory compliance, and improve operational efficiency, fostering a strong culture of data security.
